

Rotoflexi Series

Flexible Couplings

For powers up to 2000 Nm

PRODOTTI WESTCAR WESTCAR PRODUCTS

Giunti idraulici ROTOFLLUID per potenze fino 4000 kW

ROTOFLUID hydraulic couplings for rated power up to 4000 kW

Giunti a denti ROTOGEAR per coppie fino a Nm. 383.000

ROTOGEAR tooth gear couplings for torques up to 383.000 Nm

Giunti idraulici ROTOFLLUID GGG (con casse in ghisa) per potenze da 100 a 6000 kW

ROTOFLUID GGG hydraulic couplings (with cast-iron casing) for rated power from 100 to 6000 kW

Giunti elastici ROTOFLEXI® ad anello in gomma a rapida sostituzione senza spostamento dei mozzi per coppie fino a 4.000 Nm.

ROTOFLEX® flexible couplings with quick replacement of the rubber element without axial hubs movement. For torques up to 4.000 Nm

Giunti idraulici ROTOFLLUID-SCF/DCF con camera di ritardo semplice/doppia

ROTOFLUID-SCF/DCF hydraulic couplings with simple/double delay chamber

Giunti a lamelle HBX - GCX - HPX. Giunti con spaziatore HBSX - GCSX - HPSX - BE. Coppie fino a 1.043.300 Nm

HBX - GCX - HPX disc couplings. With spacer HBSX - GCSX - HPSX - BE. Torques up to 1.043.300 Nm

Giunti idraulici ROTOFLLUID-CA "ITALIAN PATENT PENDING" con camera anulare e coppia iniziale inferiore alla coppia nominale del motore

ROTOFLUID-CA "ITALIAN PATENT PENDING" hydraulic couplings with annular chamber and starting torque lower than nominal motor torque

Giunti elastici ROTOPIN a pioli con sfilamento assiale per coppie fino a 300.000 Nm

ROTOPIN flexible couplings with pins and buffers axially sliding. For torques up to 300.000 Nm

Freni a ceppi e freni a disco con servofreno

Drum and disc brakes with brake servo

Giunti elastici ROTOGRID con lamelle rastremate per coppie fino a Nm. 169.500

ROTOGRID flexible taper grid couplings. For torques up to 169.500 Nm

SOFTSTART

Avviatore statico a controllo digitale per potenze fino a 750 kW. Funzione risparmio energetico. Controllo colpo di ariete. Programmabile anche via RS 485

SOFTSTART

Static starter with digital control for rated power up to 750 kW. Energy saving function. Water hammering control. Programming also via RS 485

Giunti idromeccanici ROTOMECH ad accelerazione idraulica con innesto meccanico-centrifugo senza scorrimento a regime

ROTOMECH hydromechanical couplings with hydraulic start-up and centrifugal mechanical lock-up with zero slip at running. For rated power up to 1500 kW

A RICHIESTA SI POSSONO FORNIRE I PRODOTTI CERTIFICATI ATEX.
ON REQUEST, ATEX CERTIFIED PRODUCTS CAN BE SUPPLIED.

Il Giunto Rotoflexi è costituito da una serie di tasselli metallici, collegati tra di loro, attraverso un rivestimento circolare in gomma NR con durezza 75 Shore.
(a richiesta l'elemento elastico può essere fornito anche con materiali e durezza diverse)

All'estremità si trova uno, o due mozzi contrapposti, in Ghisa.

Il tutto, assemblato con viti in acciaio ad alta resistenza, è privo di giochi ed è in grado di correggere disallineamenti assiali, radiali e angolari.

Inoltre ha un'ottima caratteristica di assorbire strappi e vibrazioni, ciò è dovuto all'eccezionale processo di costruzione dell'anello elastico.

Può funzionare a temperature da +90°C a -20°C mantenendo inalterate le proprie prestazioni.

The Rotoflexi Coupling is consisting of a set metallic dowels connected amongst then through a NR rubber circular coating with harness 75 Shore.

(on request the elastic element can be supplied also with material and different hardnesses)

To the external side there is one or two counter-opposed hubs, made of caston iron.

The whole unit, assembled with stainless stell screws at high resistance, is gap-less and it is in the position to adjust axial disalignments, radial and angular.

Besides it has a realiable caracteristic to absorb shocks and vibrations, due to the special construction process of the elastic ring.

it can work at temperature from +90°C to -20°C keeping inalterate its performaces.

- Rapida Sostituzione dell'elemento in gomma senza spostamento assiale dei mozzi.
- Correzione di qualunque errore di allineamento.
- Assorbimento delle vibrazioni torsionali.
- Elevata resistenza meccanica.
- Riduzione degli ingombri.
- Versatilità di montaggi.
- Ampio angolo di torsione.
- Trasmissione della coppia senza giochi meccanici di centraggio.
- Isolamento elettrico ed elettrostatico.
- Nessuna manutenzione.
- Facilità di allineamento senza l'uso di strumenti.

- Quick replacement of the rubber element without axial movement of the hubs.
- Adjusment of every allignments error.
- Absorbtion of the torsional vibrations.
- High mechanical resistance.
- Reduction of the dimentions.
- Assembling versatility.
- Large torsional angle.
- Transmission of the couple without mechanical centering gaps.
- Electrostatic and electrical insulation.
- No maintenance.
- Easy alignment without use of instruments.

Type "VLGU"

Per Dimensioni e Caratteristiche Tecniche, contattare il ns. Ufficio Tecnico
For Dimensions and Technical specifications please contact our Technical Dept

Esecuzione "PARALLELA"
"PARALLEL" Execution

In questa esecuzione vengono accoppiati due elementi elastici in modo da costituire un unico elemento di sezione doppia. Ciò permette di raddoppiare il valore della coppia trasmissibile.

In this execution are coupled two elastic elements in order to form one only element of double section. This allows to double the value of the transmissible torque.

Tipo "VGGU" con due elementi elastici
 Type "VGGU" with two elastic elements

Esecuzione "IN SERIE"
"MASS" Execution

In questa esecuzione si possono accoppiare due o più elementi elastici in modo da ottenere una maggiore flessibilità. Ciò permette un maggior errore d'allineamento degli alberi e minor deformazione dell'elemento elastico, garantendo un'ottima durata. Inoltre si ottiene una riduzione del carico radiale sui supporti e un maggior assorbimento degli urti.

With this execution it is possible to couple two or more elastic elements in order to obtain a better flexibility. This allows an high error of the alignments of the shafts and less deformation of the elastic element which guaranty a long life. Besides it is obtained a reduction of the radial load on the supports and more shocks absorbtion.

Tipo "VS(2)GU" con due elementi elastici
 Type "VS(2)GU" with two elastic elements

Tipo "US(3)GU" con tre elementi elastici
 Type "US(3)GU" with three elastic elements

Tipo "US(4)GU" con quattro elementi elastici
 Type "US(4)GU" with four elastic elements

Per Dimensioni e Caratteristiche Tecniche, contattare il ns. Ufficio Tecnico
 For Dimensions and Technical specifications please contact our Technical Dept

Nella scelta del Giunto Elastico si deve considerare la Potenza da trasmettere e i giri dell'albero su cui viene montato il giunto stesso.

To select the Elastic Coupling you must consider the power to be transmitted and the shaft's r.p.m. on which the same Coupling is installed.

$$Mt = \frac{P(Kw) \times 974 \times 9.81}{\text{giri/minuto}}$$

$$Mt = \frac{P(Kw) \times 974 \times 9.81}{\text{r.p.m. / min}}$$

oppure

or

$$Mt = \frac{P(Cv) \times 716 \times 9.81}{\text{giri/minuto}}$$

$$Mt = \frac{P(Cv) \times 716 \times 9.81}{\text{r.p.m. / min}}$$

Si ottiene il Momento Torcente in Nm.

it is obtained the Torque Moment in Nm.

In base al tipo di comando e alla durata del servizio il Mt si moltiplica per il "Fattore di Servizio" (vedi Tabella 2) e si ottiene il momento torcente nominale con il quale si sceglie la grandezza del Giunto Elastico.

According to the type of drive and to the service time the Mt is multiplied for the "Service Fatcor" (see Table 2) obtaining the nominal torque moment necessary to chose the size of the elastic Coupling.

Service and Support

esco - Excellent service for excellent brands

By service, we – the esco team – mean far more than maintenance and repair. That's why our service already starts with the first phone call. Our experienced experts advise you on choosing the appropriate components and offer technically and economically convincing solutions meeting your requirements. In constructive collaboration with you and our suppliers we realize the solution concepts efficiently and give you our support throughout the whole project phase until the start-up on site. Engineering and consulting service, products of leading manufacturers and first class support – esco offers optimum performance at an economical price.

Personal consultation

At the Troisdorf offices, our field experienced engineering team answers in detail all questions regarding conception of complete drives or customization to the requirements of the application. Close cooperation and personal consultation provide confidence – and this is now more important than ever.

Service activities

We know how cost-intensive production losses resulting from machine downtime are. So, we do our utmost to make your equipment ready for operation again as fast as possible. Short reaction times due to best organized service processes and an extensive stock at the Troisdorf location with 24/48 hours delivery of all important spare parts guarantee safe operation of your machines and minimum downtimes.

For more information on clever drive solutions from esco please refer to www.esco-antriebstechnik.de.

Or simply call us! Our sales team will be pleased to help you.
